Horizontal Wall Beds

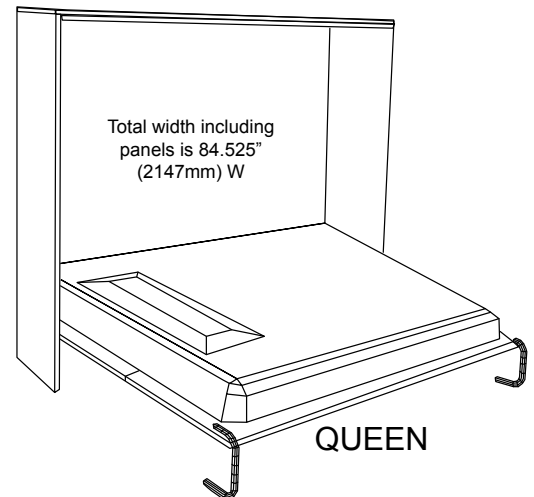

@ 41.625" (1057mm) H

@ 57.5" (1461mm) H

@ 63.563" (1614mm) H

*With the legs down, the beds extend an additional 2 inches

Sample full size horizontal bed installation

Operating the Wall Bed:

1

The wall bed is assembled and shown in the lowered position.

2

Pivot the leg towards the inside of the unit. Make sure the leg is fully closed.

3

If your bed locks, push down on the middle of the bed to unlock the piston. Repeat this operation to lock the unit for beds installed with locking pistons.

4

Pull up gently to close. The leg serves as the mattress retaining system. Pistons insure that door closes properly and stays closed.
